Yeast Theme

A Beamer Theme Demonstration

Yist Lin

November 8, 2019

Outline

1. Basic Elements

1.1. Elements Good for Presentation

1.2. Overlay Animation

2. Math Equations

2.1. Baum-Welch Algorithm

3. And This Is Simply a Test to See Whether a Very Long Section Name Looks Good in the Footline

Basic Elements

Emphasized Text

Text can have different **weight**. And not only weight, it could also *be italic*.

But most of the time, simply use `\emph{}` could be the best choice. In normal text, text being emphasized looks exactly *like italic text*.[1]

*Sometimes you really need to emphasize something, you might want it not only to be italic, but also **be bold**.*

Other than italic and bold text, text could be colored with `\alerted{}`.

[1] But it seems that this is not working in italic mode.

Ordered and Unordered Lists

The ordered list looks like this:

1. The first item
2. second one
    a. the nested first item
    b. the second one
        i. the most indented one
        ii. And the last one
    c. No this is the last one

And the unordered one looks like this:

- The first item
- and the second one
    - The first nested item
    - the second one
        - Foo
        - bar

Figure

Figure: Photo by Drew Coffman on Unsplash

Table

In my opinion, `tabularx` could work better most of the time than simply using `tabular`.

Characteristics	**Mold**	**Yeast**
Appearance	Fuzzy appearance and can be orange, green, black, brown, pink or purple in color	White and thready
Uses	Useful in biodegradation, food production (cheese)	Makeing of alcoholic beverages, used in baking, and industrial ethanol production

Table: Molds v.s. Yeasts

Elements Good for Presentation

Basic Elements

Blocks

Blocks are used to highlight some text.

Block

Just a block.

Alerted Block

This is an alerted block.

Example Block

And this is an example block.

Overlay Animation

Basic Elements

Animated

- This first item
- The second item
- The third item is hidden at first

Animated

- This first item
- The second item
- The third item is hidden at first

Math Equations

Display and Inline Mode

Many claim that the most beautiful equation is Euler's equation.

$$e^{\pi i} = 1$$

Long ago, Johann Bernoulli noted that

$$\frac{1}{1+x^2} = \frac{1}{2}\left(\frac{1}{1-ix} + \frac{1}{1+ix}\right)$$

And Roger Cotes in 1714 discovered that $ix = \ln(\cos x + i \sin x)$

Baum-Welch Algorithm

Math Equations

Forward Procedure

Forward algorithm: define a forward variable $\alpha_t(i)$

$$\alpha_t(i) = P(o_1, o_2, \ldots, o_t,\ q_t = i \mid \lambda) \tag{1}$$

$$= \text{Prob}\,[\,\text{observing}\ o_1, o_2, \ldots, o_t,\ \text{state}\ i\ \text{at time}\ t \mid \lambda\,] \tag{2}$$

Initialization

$$\alpha_1(i) = \pi_i b_i(o_1),\ 1 \leqslant i \leqslant N \tag{3}$$

Induction

$$\alpha_{t+1}(j) = \left[\sum_{i=1}^{N} \alpha_t(i) a_{ij}\right] \cdot b_j(o_{t+1}),$$

$$1 \leqslant t \leqslant T-1,\ 1 \leqslant j \leqslant N \tag{4}$$

Termination

$$P\left(\bar{O} \mid \lambda\right) = \sum_{i=1}^{N} \alpha_T(i) \tag{5}$$

Backward Procedure

Backward algorithm: define a backward variable $\beta_t(i)$

$$\beta_t(i) = P(o_{t+1}, o_{t+2}, \ldots, o_T \mid q_t = i, \lambda) \tag{6}$$

$$= \text{Prob}\,[\,\text{observing}\, o_{t+1}, o_{t+2}, \ldots, o_T \mid \text{state}\, i\, \text{at time}\, t,\ \lambda\,] \tag{7}$$

Initialization

$$\beta_T(i) = 1,\ 1 \leqslant i \leqslant N \tag{8}$$

Induction

$$\beta_t(i) = \sum_{j=1}^{N} a_{ij}\ b_j(o_{t+1})\ \beta_{t+1}(j),$$

$$t = \{T-1, T-2, \ldots, 1\},\ 1 \leqslant i \leqslant N \tag{9}$$

And This Is Simply a Test to See Whether a Very Long Section Name Looks Good in the Footline
